SECTION 1. GENERAL PROVISIONS

1.1 Floodplain Hazard Management Regulations
1.2 Statutory Authority
1.3 Findings of Fact
1.4 Purpose
1.5 Methods to Reduce Losses
1.6 Regulated Area
1.7 Floodplain Administrator
1.8 Compliance
1.9 Abrogation and Greater Responsibility
1.10 Regulation Interpretation
1.11 Warning and Disclaimer of Liability
1.12 Severability
1.13 Disclosure Provision
1.14 Amendment of Regulations
1.15 Public Records
1.16 Subdivision Review
1.17 Disaster Recovery

SECTION 2. DEFINITIONS

SECTION 3. FORMS AND FEES

3.1 Forms
3.2 Fees

SECTION 4. REGULATED FLOOD HAZARD AREAS

4.1 Regulated Flood Hazard Areas
4.2 Interpretation of Regulated Flood Hazard Area Boundaries
4.3 Alteration of Regulated Flood Hazard Area

SECTION 5. USES ALLOWED WITHOUT A PERMIT WITHIN THE REGULATED FLOOD HAZARD AREA

5.1 General

SECTION 6. PROHIBITED USES, ACTIVITIES AND STRUCTURES WITHIN THE REGULATED FLOOD HAZARD AREA

6.1 Floodway
6.2 Flood Fringe or Regulated Flood Hazard Area Without a Floodway
SECTION 7. FLOODPLAIN PERMIT APPLICATION REQUIREMENTS

7.1 General
7.2 Required Floodplain Permit Application Information

SECTION 8. APPLICATION EVALUATION

8.1 Floodplain Permit Application Review
8.2 Notice Requirements for Floodplain Permit Applications
8.3 Floodplain Permit Criteria
8.4 Decision
8.5 Floodplain Permit Conditions and Requirements

SECTION 9. DEVELOPMENT REQUIREMENTS IN THE FLOODWAY

9.1 Uses Requiring Permits
9.2 General Requirements
9.3 Mining Of Material Requiring Excavation From Pits Or Pools
9.4 Railroad, Highway And Street Stream Crossings
9.5 Limited Filling For Road, And Railroad Embankments
9.6 Buried Or Suspended Utility Transmission Lines
9.7 Storage Of Materials And Equipment
9.8 Domestic Water Supply Wells
9.9 Buried And Sealed Vaults For Sewage Disposal in Campgrounds and Recreational Areas
9.10 Public and Private Campgrounds
9.11 Structures Accessory Or Appurtenant
9.12 Construction Of Or Modifications To Surface Water Diversions
9.13 Flood Control And Bank Protection Measures
9.14 Stream and Bank Restoration
9.15 Alterations to Existing Residential and Nonresidential Buildings

SECTION 10. DEVELOPMENT REQUIREMENTSIN THE FLOOD FRINGE OR REGULATED FLOOD HAZARD AREA WITH NO FLOODWAY

10.1. Uses Requiring Permits
10.2. General Requirements
10.3. Residential Building, Exceptions and Additional Requirements
10.4. Non-Residential Building, Exceptions and Additional Requirements

SECTION 11. EMERGENCIES

11.1 General
11.2 Emergency Notification and Application Requirements
SECTION 12. VARIANCES

12.1 General
12.2 Variance Application Requirements
12.3 Notice Requirements for Floodplain Variance Application
12.4 Evaluation of Variance Application
12.5 Decision
12.6 Judicial Review

SECTION 13. ADMINISTRATIVE APPEALS

13.1 General
13.2 Appeals Requirements
13.3 Notice and Hearing
13.4 Decision
13.5 Judicial Review

SECTION 14. ENFORCEMENT

14.1. Investigation Request
14.2. Notices To Enter And Investigate Lands Or Waters
14.3. Notice To Respond And Order To Take Corrective Action
14.4. Administrative Review
14.5. Appeal of Administrative Decision
14.6. Failure to Comply With Order to Take Corrective Action
14.7. Judicial Review
14.8. Other Remedies

SECTION 15. PENALTIES

15.1 Misdemeanor
15.2 Declaration to the Federal Flood Insurance Administrator
SECTION 1. GENERAL PROVISIONS

1.1 FLOODPLAIN HAZARD MANAGEMENT REGULATIONS
These regulations are known and may be cited as the “Floodplain Hazard Management Regulations,” hereinafter referred to as “these regulations.”

1.2 STATUTORY AUTHORITY

1. Floodplain and Floodway Management is incorporated in Montana Code Annotated (MCA) Title 76, Chapter 5 and describes the authority, procedures and minimum standards for local regulations and is further described in Montana Administrative Rule (ARM) 36, Chapter 15.

2. The authority to regulate development in specifically identified flood hazard areas has been accepted pursuant to 76-5-301, MCA.

1.3 FINDINGS OF FACT

1. Flood hazard areas specifically adopted herein as Regulated Flood Hazard Areas have been delineated and designated by order or determination of the Department of Natural Resources and Conservation (DNRC) pursuant to MCA 76-5-201 et.seq.

2. These regulations have been reviewed by Montana Department of Natural Resources and Conservation and the Federal Emergency Management Agency. The Montana Department of Natural Resources and Conservation has found the regulations acceptable in meeting the Department minimum standards. The Federal Emergency Management Agency finds that these regulations are adequate and consistent with the comprehensive criteria for land management and use pursuant to the standards established in 44 CFR 60.3. (76-5-302, MCA, ARM 36.15.202, 44 CFR60.1(b), 42 USC 4022)

1.4 PURPOSE
The purpose of these regulations is to promote public health, safety and general welfare of the residents and minimize public and private losses due to flood conditions in Regulated Flood Hazard Areas. These Regulations are intended to:

1. Protect human life and health;

2. Minimize expenditure of public money for costly flood control projects;

3. Minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;

4. Minimize prolonged business and public service interruptions;

5. Minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, streets and bridges;
6. Help maintain a stable tax base by providing for the sound use and development of flood-prone areas in such a manner as to minimize future flood disruptions; and to

7. Ensure compliance with the minimum standards for the continued participation in the National Flood Insurance Program for the benefit of the residents.

1.5 METHODS TO REDUCE LOSSES
In accordance with 76-5-102, MCA, these regulations are intended to reduce flood losses through the following methods:

1. Restrict or prohibit uses that are dangerous to health, safety or property in times of flooding or that may cause excessive increases in flood heights or velocities;

2. Require that uses of land vulnerable to floods, including public facilities, be developed or constructed to at least minimum standards or to otherwise minimize flood damage;

3. Regulate the alteration of natural floodplains, stream channels, and natural protective barriers which are needed to accommodate floodwaters;

4. Regulate filling, grading, dredging and other development which may increase flood damage;

5. Prevent or regulate the construction of flood barriers which will impact other land, flood water depth or velocity of floodwaters;

6. Distinguish between the land use regulations applied to the floodway within the Regulated Flood Hazard Area and those applied to that portion of the Regulated Flood Hazard Area not contained in the floodway;

7. Apply more restrictive land use regulations within the floodway of the Regulated Flood Hazard Area; and

8. Ensure that regulations and minimum standards balance the greatest public good with the least private injury in so far as possible.

1.6 REGULATED AREA
These regulations apply only to the flood hazard areas specifically adopted herein as Regulated Flood Hazard Areas which are more fully and specifically described in Section 4. Requirements and approvals for alterations to the Regulated Flood Hazard Area are specified in Section 4. The Regulated Flood Hazard Area includes areas specifically identified, labeled and illustrated on maps such as Floodplain, Floodway, or Flood Fringe that have differing uses allowed and minimum building standards that apply. The Regulated Flood Hazard Area is the geographic area inundated by the Flood of 100-year Frequency illustrated and depicted in the referenced studies and maps.

The Regulated Flood Hazard Area supporting study and maps illustrating the regulatory area are based on studies and maps completed for the DNRC and may include Special Flood Hazard Areas and Flood Insurance Studies by FEMA or studies by others that have been specifically adopted by DNRC pursuant to 76-5-201et.seq., MCA. The maps and accompanying study become the Regulated Flood Hazard Area only when formally
adopted by DNRC and subsequently by the political subdivision by an ordinance or regulation.

1.7 FLOODPLAIN ADMINISTRATOR
A Floodplain Administrator may be designated by the Yellowstone County Board of County Commissioners. The Floodplain Administrator’s duty is to administer and implement the provisions of these regulations. The Floodplain Administrator must serve to meet and maintain the commitments pursuant to 44 CFR 59.22(a) to FEMA to remain eligible for FEMA Flood Insurance for individuals and business within the political subdivision.

1.8 COMPLIANCE Development, New Construction, Alteration or Substantial Improvement may not commence without full compliance with the provisions of these regulations.

1.9 ABROGATION AND GREATER RESPONSIBILITY
It is not intended by these regulations to repeal, abrogate, or impair any existing easements, covenants, deed restrictions, zoning or other regulations in effect. However, where these regulations impose greater restrictions, the provision of these regulations must prevail.

1.10 REGULATION INTERPRETATION
In the interpretation and application of these regulations, all provisions must be: (1) considered as minimum requirements; (2) liberally construed in favor of the governing body; and (3) deemed neither to limit nor repeal any other powers granted under state statutes.

1.11 WARNING AND DISCLAIMER OF LIABILITY
These regulations do not imply that land outside the Regulated Flood Hazard Areas or uses permitted within such areas will be free from flooding or flood damages. These regulations shall not create liability on the part of the community or any official or employee thereof for any flood damages that result from reliance on these regulations or any administrative decision lawfully made hereunder.

1.12 SEVERABILITY
If any section, clause, sentence, or phrase of these regulations is held to be invalid or unconstitutional by any court of competent jurisdiction, then said holding will in no way affect the validity of the remaining portions of these regulations.

1.13 DISCLOSURE PROVISION
All property owners or their agents in the Regulated Flood Hazard Areas shall notify potential buyers or their agents that such property is located within the Regulated Flood Hazard Area and is subject to regulation and any permitted uses that are transferred. Information regarding Regulated Flood Hazard Area and the repository for Floodplain maps is available in the Floodplain Administrator's office.
1.14 AMENDMENT OF REGULATIONS
These regulations may be amended after notice and public hearing in regard to the amendments to these regulations. The amendments must be found adequate and acceptable by DNRC and FEMA to be effective and must be submitted for review at least 30 days prior to official adoption.

1.15 PUBLIC RECORDS
Records, including permits and applications, elevation and flood proofing certificates, certificates of compliance, fee receipts, and other matters relating to these regulations must be maintained by the Floodplain Administrator and are public records and must be made available for inspection and for copies upon reasonable request. A reasonable copying cost for copying documents for members of the public may be charged and may require payments of the costs before providing the copies.

1.16 SUBDIVISION REVIEW
Within the Regulated Flood Hazard Area, subdivisions including new or expansion of existing manufactured home parks, must be designed to meet the following criteria:

1. The Base Flood Elevations and boundary of the Regulated Flood Hazard area must be determined and considered during lot layout and building location design;

2. Locations for future structures and development must be reasonably safe from flooding;

3. Adequate surface water drainage must be provided to reduce exposure to flood hazards;

4. Public utilities and facilities such as sewer, gas, electrical and water systems must be located and constructed to minimize or eliminate flood damage; and

5. Floodplain permits must be obtained according to these regulations before development occurs that is within the Regulated Flood Hazard Area.

1.17 DISASTER RECOVERY
In the event of a natural or man-made disaster, the Floodplain Administrator should participate in the coordination of assistance and provide information to structure owners concerning Hazard Mitigation and Recovery measures with the Federal Emergency Management Agency, Montana Disaster Services, Montana Department of Natural Resources and Conservation, and other state, local and private emergency service organizations.
Upon completion of cursory street view structure condition survey within the Regulated Flood Hazard Area, the Floodplain Administrator shall notify owners that a permit may be necessary before repair or reconstruction commences on damaged structures that have sustained an estimated 50% or more in damages caused by natural or man-made disasters such as floods, fires or winds.

Owners should be advised that structures that have suffered substantial damage and will undergo substantial improvements require a floodplain application and permit and must be upgraded to meet the minimum building standards herein during repair or reconstruction.
SECTION 2. DEFINITIONS

Unless specifically defined below, words or phrases used in these regulations shall be interpreted as to give them the meaning they have in common usage and the most reasonable application. For the purpose of these regulations, the following definitions are adopted:

100-year Flood – One percent (1%) annual chance flood. See Base Flood

Alteration – Any change or addition to an artificial obstruction that either increases its external dimensions or increases its potential flood hazard. See also Substantial Improvement.

Appurtenant Structure – A structure in which the use is incidental or accessory to the use of a principal structure.

Artificial Obstruction – Any obstruction which is not natural and includes any development, dam, diversion, wall, riprap, embankment, levee, dike, pile, abutment, projection, revetment, excavation, channel rectification, road, bridge, conduit, culvert, building, refuse, automobile body, fill or other analogous structure or matter in, along, across, or projecting into any Regulated Flood Hazard Area that may impede, retard, or change the direction of the flow of water, either in itself or by catching or collecting debris carried by the water, or that is placed where the natural flow of the water would carry the same downstream to the damage or detriment of either life or property. See also Development.

Base Flood (Flood of 100 Year Frequency) – A flood having a one percent (1%) chance of being equaled or exceeded in any given year

Base Flood Elevation (BFE) – The elevation above sea level of the Base Flood in relation to the National Geodic Vertical Datum of 1929 or the North American Vertical Datum of 1988 or unless otherwise specified.

Basement – Any area of a building, except a crawl space, as having its Lowest floor below ground level on all sides.

Building – A walled and roofed structure, including a gas or liquid storage tank that is principally above ground, as well as a manufactured home.

Channel – The geographical area within either the natural or artificial banks of a watercourse or drain way.

Crawl Space – An enclosure that has its interior floor area no more than 5 feet below the top of the next highest floor. See Enclosure and Sub grade Crawlspace.
DNRC – Montana Department of Natural Resources and Conservation

Development – Any man-made change to improved or unimproved real estate, including but not limited to buildings or other structures, mining, dredging, filling, grading, paving, excavation or drilling operations or storage of equipment or materials. See also Artificial Obstruction.

Elevated Building – A building that has no Basement and that has its lowest elevated floor raised above ground level by foundation walls, shear walls, posts, piers, pilings or columns. A building on a crawlspace is considered an elevated building.

Enclosure – That portion below the lowest elevated floor of an elevated building that is either partially or fully shut in by rigid walls including a crawlspace, sub grade crawlspace, stairwell, or elevator below the Lowest Floor of an elevated building. A garage below or attached to an elevated building is considered an enclosure.

Encroachment – Activities or construction within the Regulated Flood Hazard Area including fill, new construction, substantial improvements, and other development.

Encroachment Analysis – A hydrologic and hydraulic analysis performed by an engineer to assess the effects of the proposed artificial obstruction or nonconforming use on Base Flood Elevation and flood velocities.

Establish – To construct, place, insert, or excavate.

FEMA – Federal Emergency Management Agency

Flood Fringe – The identified portion of the Floodplain of the Regulated Flood Hazard Area outside the limits of the Floodway.

Flood of 100 Year Frequency (Base Flood) – A flood magnitude expected to recur on the average of once every 100-years or a flood magnitude that has a 1% chance of occurring in any given year.

Floodplain – The area of the Regulated Flood Hazard Area including and adjoining the watercourse or drainway that would be covered by the floodwater of a Base Flood. The area is partitioned into a Flood Fringe and Floodway where specifically designated. See Regulated Flood Hazard Area.

Floodway – The identified portion of the Floodplain of the Regulated Flood Hazard Area that is the channel and the area adjoining the channel that is reasonably required to carry the discharge of the Base Flood without cumulatively increasing the water surface by more than one half foot.

Floodplain Administrator – Community official or representative appointed to administer and implement the provisions of this ordinance.
Flood Proofing – Any combination of structural and non-structural additions, changes, or adjustments to structures which reduce or eliminate flood damage to real estate or improved real property, water and sanitary facilities, electrical, plumbing, HVAC systems, structures and their contents. The term includes wet flood proofing, dry flood proofing and elevation of structures.

Letter of Map Change (LOMC) – An official response from FEMA that amends or revises the FEMA Special Flood Hazard Area and FEMA Flood Insurance Study for flood insurance purposes and/or flood risk hazard. FEMA Letters of Map Change specific to an amendment or revision include:

**Letter of Map Amendment (LOMA)** – A letter of determination from FEMA issued in response to a request that a property or structure is not subject to the mandatory flood insurance requirement because it was inadvertently located in the effective FEMA Special Flood Hazard Area. The material submitted and response from FEMA may be considered by the Floodplain Administrator for determining if a property or structure is within the Regulated Flood Hazard area and subject to these regulations.

**Letter of Map Revision Based on Fill (LOMR-F)** – A letter of approval from FEMA removing the mandatory requirement for flood insurance on property based on placement of fill or an addition. Placement of fill or an addition must be preceded by a permit pursuant to these regulations. Placement of fill does not remove the development from the Regulated Flood Hazard Area or these regulations.

**Letter of Map Revision (LOMR)** – An official FEMA amendment to the currently effective FEMA Flood Insurance Rate Map or FEMA Flood Boundary Map based on a physical change to the floodplain of the Special Flood Hazard Area. It is issued by FEMA and changes flood zones, delineations, and elevations on the FEMA Flood Insurance Rate Map or FEMA Flood Boundary Map and may amend the FEMA Flood Insurance Study. It must be preceded by an approved alteration of the designated floodplain from DNRC and subsequently an amendment to the Regulated Flood Hazard Area.

**Conditional Letter of Map Revision (CLOMR)** – A letter of approval for a proposed physical change that when completed would change by a subsequent LOMR the flood zones, delineation or elevations on the FEMA Flood Insurance Rate Map or FEMA Flood Boundary Map and may amend the FEMA Flood Insurance Study. The CLOMR may be considered in an evaluation by DNRC and the Floodplain Administrator during consideration of a proposed amendment to the Regulated Flood Hazard Area.

Lowest Floor – Any floor of a building including a basement used for living purposes, storage, or recreation. This includes any floor that could be converted to such a use.

Manufactured Home Park or Subdivision – Includes the construction of facilities for servicing the manufactured home lots and at a minimum includes the installation of
utilities, the construction of streets, and either final site grading or the pouring of concrete pads.

**Manufactured or Mobile Home** – A building that is transportable in one or more sections, built on a permanent chassis, and designed to be used with or without a permanent foundation when connected to the required utilities and includes park trailers, travel trailers, and other similar vehicles placed on a site for greater than 180 consecutive days.

**New Construction** – Structures for which the commencement of clearing, grading, filling, or excavating to prepare a site for construction occurs on or after the effective date of these regulations and includes any subsequent improvements to such structures.

**New Manufactured Home Park Or Subdivision** – A manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed includes at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads and is completed on or after the effective date of floodplain management regulations adopted by a community.

**Non-Residential** – Buildings including manufactured homes that are not residential including commercial, agricultural, and industrial buildings. See Residential.

**Owner** – Any person who has dominion over, control of, or title to an artificial obstruction.

**Person** – Includes any individual, or group of individuals, corporation, partnership, association or any other entity, including State and local governments and agencies.

**Recreational Vehicle** – A park trailer, travel trailer, or other similar vehicle which is
(a) built on a single chassis;
(b) 400 square feet or less when measured at the largest horizontal projections;
(c) designed to be self-propelled or permanently towable by a motorized vehicle; and
(d) designed primarily for use as temporary living quarters for recreation, camping, travel, or seasonal use, not for use as a permanent dwelling.

**Regulated Flood Hazard Area** – A Floodplain whose limits have been designated pursuant to Part 2, Chapter 5 of Title 76, MCA, and is determined to be the area adjoining the watercourse that would be covered by the floodwater of a Base Flood, a flood of a 100-year frequency. The Regulated Flood Hazard Area consists of the Floodway and Flood Fringe where specifically designated.
**Residential Building** – A dwelling or building for living purposes or place of assembly or permanent use by human beings and including any mixed use of residential and non-residential use. All other buildings are **non-residential**.

**Riprap** – Stone, rocks, concrete blocks, or analogous material that is placed along the bed or banks of a watercourse or drainway for the purpose of preventing or alleviating erosion.

**Scour Depth** – The maximum depth of streambed scour caused by erosive forces of the Base Flood.

**Special Flood Hazard Area** – Land area which has been specifically identified by the Federal Emergency Management Agency as the floodplain within a community subject to a 1 percent or greater chance of flooding in any given year. It is useful for the purposes of identifying flood hazards by local subdivisions of government for regulatory purposes as well as use by the National Flood Insurance Program for establishing risk zones and flood insurance premium rates. The FEMA flood hazard area zone designation or flood risk potential is as illustrated on FEMA's Flood Hazard Boundary Map or Flood Insurance Rate Map.

**Structure** – Any Artificial Obstruction.

**Sub grade Crawl space** – A Crawlspace foundation enclosure where the sub grade under-floor area is no more than 5 feet below the top of the next higher floor and no more than 2 feet below the lowest adjacent grade on all sides. A foundation exceeding either dimension is a Basement.

**Substantial Damage** – Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would exceed 50 percent of the market value of the structure before the damage occurred.

**Substantial Improvement** – Any repair, reconstruction or improvement of a structure where the cost equals or exceeds fifty percent (50) of the market value of the structure either before the improvement or repair is started or if the structure has been damaged, and is being restored, before the damage occurred;

1. Substantial improvement is considered to occur when the first construction of any wall, ceiling, floor or other structural part of the building commences;

2. The term does not include:

   1. Any project for improvement of a structure to comply with existing state or local health, sanitary, or safety code specifications which are solely necessary to assure safe living conditions; or

   2. Any alteration of a structure listed on the national register of historic places or state inventory of historic places.

**Suitable Fill** – Fill material which is stable, compacted, well graded, and pervious, not adversely affected by water and frost, devoid of trash or similar foreign matter, tree
stumps or other organic material; and is fitting for the purpose of supporting the intended use and/or permanent structure.

**Variance** – Means a grant or relief from the development requirements of these regulations which would permit construction in a manner that would be otherwise prohibited by these regulations by an approval pursuant Section 12.

**Violation** – A finding and order pursuant to the regulations against the owner or responsible party of the failure of a structure or other development to be fully compliant with these regulations.
SECTION 3. FORMS AND FEES

3.1 Forms The following forms may be required by the Floodplain Administrator:

1. Floodplain Permit Application Form – The “Joint Application for Proposed Work in Montana’s Steams, Wetlands, Regulated Flood Hazard Areas, and Other Water Bodies”, or other designated application form. A completed FEMA MT-1 form may be required to accompany the application when required by the Floodplain Administrator.

2. Floodplain Permit Compliance Report – A report required to be submitted by the Applicant to the Floodplain Administrator once the permitted project in the Regulated Flood Hazard Area is completed or within the designated time stipulated on the Floodplain permit. A compliance report including an elevation and or flood proofing certificate may be required where specified.

3. Floodplain Variance Application Form – An application submitted by the Applicant to the Floodplain Administrator for review of the proposed project prior to the initiation of the project requiring a variance.

4. Floodplain Appeal Notice Form – A form submitted by the Applicant or an aggrieved party as a notice and request for review of the decision to grant, grant with conditions or deny a floodplain permit as issued by the Floodplain Administrator and to be reviewed pursuant to Section 13.

5. Floodplain Emergency Notification Form – A written notification form required to be used by persons to notify the Floodplain Administrator of projects undertaken during an emergency to safeguard life or structures. This is not a Floodplain Permit application and the person must take additional steps, as outlined in Section 11.

6. Official Complaint Form – A form that may be used by any person to notify the Floodplain Administrator of an activity taking place without an approved and required Floodplain permit. Persons may make complaints without use of this form.

3.2 Fees

A reasonable application fee for processing of permit applications may be imposed. Fees may be adopted for costs of permit applications, notices, variances, inspections, certifications or other administrative actions required by these regulations.
SECTION 4. REGULATED FLOOD HAZARD AREA

4.1 REGULATED FLOOD HAZARD AREAS

1. The Regulated Flood Hazard Areas are the 100-year floodplains illustrated and referenced in the following specific studies and reports described as follows:

1. November 6, 2013 FEMA Flood Insurance Study (FIS) and Flood Insurance Rate Maps (FIRM) for the City of Billings and Yellowstone County, Montana (including the Clarks Fork River Study) including the areas of the 100-year floodplain, and

2. “Best Available Data” as shown on the “Map of Flood-Prone Areas by the US Department of the Interior, USGS, for those areas not included above in Section 4.1.1. See Section 10.

2. The Regulated Flood Hazard Areas specifically described or illustrated in the above referenced studies and maps of the 100-year floodplain have been delineated, designated and established by order or determination by the DNRC pursuant to 76-5-201et.seq., MCA.

3. Use allowances, design and construction requirements specifically in Sections 5, 6, 9, and 10 in these regulations vary by the specific Floodplain areas including areas identified as Floodway and Flood Fringe within the Regulated Flood Hazard Area.

4. For Further information as to flood regulated areas, contact the Yellowstone County Floodplain Administrator’s office.

4.2 INTERPRETATION OF REGULATED FLOOD HAZARD AREA BOUNDARIES

1. The mapped boundaries of the Floodplain illustrated in the referenced studies and maps in this Section are a guide for determining whether property is within the Regulated Flood Hazard Area.

2. A determination of the outer limits and boundaries of the Regulated Flood Hazard Area or the Flood Fringe and Floodway within the Regulated Flood Hazard Area includes an evaluation of the maps as well as the particular study data referenced in this Section. The supporting study material takes precedence over any map illustrations.

3. The Floodplain boundary is delineated by the Base Flood Elevation. The actual intersection of the applicable study Base Flood Elevations with the natural
adjacent terrain of the watercourse or channel is the physical field Floodplain regulatory boundary.

4. The Floodway boundary where identified within the Floodplain is as illustrated on the referenced maps and studies. Since the Floodway boundary is a study feature, the location of the boundary may be physically located by referencing the study data to a ground feature. The Floodplain Administrator’s interpretation of the boundary and decision may be appealed as set forth in Section 13.

5. If the Floodplain Administrator determines a proposed development is within the regulatory area:

1. Where Base Flood Elevations exist, the property owner may provide additional information which may include elevation information provided by an engineer or land surveyor in order to re-determine if the proposed development is subject to these regulations.

2. Where Base Flood Elevations do not exist, the property owner may provide additional information to be considered to re-determine the scaled location of the regulatory boundary or alternatively provide a computed Base Flood Elevation provided by an engineer.

3. The Floodplain Administrator’s interpretation of the boundaries and decision may be appealed as set forth in Section 13.

6. Any owner or lessee of property who believes his property has been inadvertently included in the Floodplain including the Floodway or Flood Fringe of the Regulated Flood Hazard Area may submit scientific and/or technical information to the Floodplain Administrator for a determination if the property is appropriately located. Scientific or technical information submitted to FEMA by an owner to affect the insurance rating for insurance purposes may be considered by the Floodplain Administrator. A determination by the Floodplain Administrator is independent of any determination by FEMA for insurance purposes. Any request for a FEMA determination of the flood insurance risk rating of a property or structure relative to the FEMA Special Flood Hazard area is the responsibility of the owner or lessee.

4.3 ALTERATION OF REGULATED FLOOD HAZARD AREA

1. An alteration of the Regulated Flood Hazard Area is a DNRC approved amendment to the DNRC order that originally delineated and designated the 100-year floodplain and is the basis of the Regulated Flood Hazard Area referenced in Section 4.1.2. A DNRC approved alteration consists of revisions or updates to the specific maps and data of the referenced studies
in this Section and forms the basis for an amendment to the Regulated Flood Hazard Area in these regulations;

2. Any alteration can only be implemented by an amendment to the Regulated Flood Hazard Area described in Section 4.1.1;

3. An alteration of the Regulated Flood Hazard Area may be the result of DNRC consideration of substantial natural physical change or new technical or scientific flood data showing that the Base Flood Elevation has or may be changed or was erroneously established;

4. Any proposed development or artificial obstruction that causes an increase of 0.5 feet or more to the Base Flood Elevation of a Regulated Flood Hazard Area without a Floodway or an increase of more than 0.00 feet to the Base Flood Elevation of a Floodway requires a DNRC approved alteration of the Regulated Flood Hazard Area pursuant to 76-5-203, MCA. A petition to DNRC from any person for alteration of the Regulated Flood Hazard Area by DNRC must include the following information:

   1. Certification that no buildings are located in the areas which would be impacted by the increased Base Flood Elevation;

   2. Evidence of notice and concurrence of all property and land owners of the proposed impacts to their properties;

   3. Information that demonstrates that alternatives are not feasible;

   4. Information that demonstrates that development is for a public use or benefit; and

   5. Any other supporting information and data as needed for approvals.

5. The Floodplain Administrator may represent any necessary applications, approvals or endorsements by the permit authority to FEMA where affecting the FEMA Special Flood Hazard Area;

6. A determination by the Floodplain Administrator that land areas located within the Regulated Flood Hazard Area are naturally at or above the Base Flood Elevation as proven by a certified elevation survey does not constitute or require an alteration or an amendment of the Regulated Flood Hazard Area; and
7. Elevating with suitable fill as permitted does not alter the Regulated Flood Hazard Area or remove the elevated area from the Regulated Flood Hazard Area. (ARM 36.15.505(2))
SECTION 5. USES ALLOWED WITHOUT A PERMIT WITHIN THE REGULATED FLOOD HAZARD AREA

5.1 - GENERAL The following open space uses shall be allowed without a permit in the Regulated Flood Hazard Area, provided that such uses are not prohibited by any other ordinance or statute, do not require structures, and do not require fill, grading, excavation or storage of materials or equipment:

1. Agricultural uses, not including related structures, such as tilling, farming, irrigation, ranching, harvesting, grazing, etc;

2. Accessory uses, not including structures, such as loading and parking areas, or emergency landing strips associated with industrial or commercial facilities;

3. Forestry, including processing of forest products with portable equipment;

4. Recreational vehicle use provided that the vehicle is on the site for fewer than 180 consecutive days and the vehicle is fully licensed and ready for highway use. A recreational vehicle is ready for highway use if it is on its wheels or jacking system with wheels intact, is attached to the site only by quick disconnect type utilities and security devices, and has no permanently attached additions;

5. Residential uses such as lawns, gardens, parking areas, and play areas;

6. Maintenance of the existing state of an existing open space uses including preventive maintenance activities such as bridge deck rehabilitation and roadway pavement preservation activities. Maintenance cannot increase the external size or increase the hazard potential of the existing open space use;

7. Public or private recreational uses not requiring structures such as picnic grounds, swimming areas, boat ramps, parks, campgrounds, golf courses, driving ranges, archery ranges, wildlife management and natural areas, alternative livestock ranches (game farms), fish hatcheries, shooting preserves, target ranges, trap and skeet ranges, hunting and fishing areas, and hiking and horseback riding trails;

8. Fences that have a low impact to the flow of water such as barbed wire fences and wood rail fences, and not including permanent fences crossing channels. Fences that have the potential to stop or impede flow or debris such as a chain link or privacy fence requires a floodplain permit;

9. Addition of highway guard rail, signing and utility poles that have a low impact to the flow of water along an existing roadway.
10. Irrigation and livestock supply wells, provided that they are located at least 500 feet from domestic water supply wells and with the top of casing 18” above the Base Flood Elevation.
SECTION 6. PROHIBITED USES, ACTIVITIES AND STRUCTURES WITHIN THE REGULATED FLOOD HAZARD AREA

6.1 FLOODWAY The following artificial obstructions and nonconforming uses are prohibited in the Floodway of the Regulated Flood Hazard Area:

1. A building for residential or non-residential purposes;

2. A structure, fill, or excavation that would cause water to be diverted from the Floodway, cause erosion, obstruct the natural flow of waters or reduce the carrying capacity of the Floodway. Notwithstanding these requirements, excavation or fill may be allowed when it is a component to a permitted use allowed in these regulations;

3. The construction or storage of an object (artificial obstruction) subject to flotation or movement during flood level periods;

4. Solid and Hazardous waste disposal and individual and multiple family sewage disposal systems unless the systems meet the local health and sanitation regulations and when permitted pursuant to these regulations;

5. Storage of toxic, flammable, hazardous or explosive materials; and

6. Cemeteries, mausoleums, or any other burial grounds.

6.2 FLOOD FRINGE OR REGULATED FLOOD HAZARD AREA WITHOUT A FLOODWAY The following artificial obstructions and nonconforming uses are prohibited in the Flood Fringe or Regulated Flood Hazard Area without a Floodway:

1. Solid and hazardous waste disposal;

2. Storage of toxic, flammable, hazardous or explosive materials;

3. The construction or storage of an artificial obstruction subject to flotation or movement during flood level periods;

4. Cemeteries, mausoleums, or any other burial grounds; and

5. Critical facilities, including buildings and associated structures that provide essential community care and emergency operation functions such as schools, hospitals, nursing home facilities, fire stations and police stations.
SECTION 7. FLOODPLAIN PERMIT APPLICATION REQUIREMENTS

7.1 GENERAL

1. A Floodplain permit is required for a person to establish, alter or substantially improve an artificial obstruction, nonconforming use or development within the Regulated Flood Hazard Area;

2. A Floodplain permit is required for artificial obstructions, nonconforming uses and uses not specifically listed in Sections 9 and 10, except as allowed without a Floodplain permit in Section 5 or as prohibited as specified in Section 6, within the Regulated Flood Hazard Area;

3. Artificial obstructions and nonconforming uses in a Regulated Flood Hazard Area not exempt under Section 5 are public nuisances unless a Floodplain permit has been obtained;

4. A Floodplain permit is required for an alteration of an established artificial obstruction or nonconforming use that increases the external size or increases its potential flood hazard and not exempt under Section 5;

5. A Floodplain permit is required to reconstruct or repair an existing established structure that has experienced substantial damage or will undergo substantial improvement; and

6. Maintenance of the existing state of an artificial obstruction or nonconforming use is not an alteration of an existing artificial obstruction. Maintenance cannot increase the external size or increase the flood hazard potential of the existing artificial obstruction or nonconforming use.

7.2 REQUIRED FLOODPLAIN PERMIT APPLICATION INFORMATION

1. A Floodplain permit application shall include, but is not limited to the following:

   1. A completed and signed Floodplain Permit Application;

   2. The required review fee;

   3. Plans in duplicate drawn to scale showing the location, dimensions, and elevation of the proposed project including landscape alterations, existing and proposed structures, and the location of the foregoing in relation to the Regulated Flood Hazard Areas and if applicable the Floodway boundary;
4. A copy of other required applicable permits, a statement from the required applicable authority stating that the permit is issued, or pending applications as submitted which may include but are not limited to a 310 permit, SPA 124 permit, Section 404 Permit, 318 Authorization, 401 Certification or a Navigable Rivers Land Use License or Easement from federal, state, and local agencies, for the proposed floodplain project; and the applicant must show that the Floodplain permit application is not in conflict with the relevant and applicable permits; and

5. Additional information related to the specific use or activity that demonstrates the design criteria and construction standards are met or exceeded as specified in Sections 9 and 10.
8.1 FLOODPLAIN PERMIT APPLICATION REVIEW

1. The Floodplain Administrator shall review and evaluate the Floodplain application and shall approve, approve with conditions, or deny the application within 60 days of receipt of a correct and complete application.

2. The Floodplain Administrator shall determine whether the Floodplain application contains the applicable elements required in these regulations and shall notify the applicant of the Floodplain Administrator’s determination.

3. If the Floodplain application is found insufficient and if the applicant corrects the identified deficiencies and resubmits the Floodplain application, the Floodplain Administrator shall notify the applicant whether the resubmitted Floodplain application contains all the elements required by these regulations, as applicable.

4. This process shall be repeated until the applicant submits a completed Floodplain application containing all the elements required by these regulations, or the application is withdrawn.

5. If after a reasonable effort the Floodplain Administrator determines that the Floodplain application remains incomplete, the Floodplain Administrator shall deny the Floodplain application and notify the applicant of missing elements. No further action shall be taken on the Floodplain application by the Floodplain Administrator until the Floodplain application is resubmitted.

6. A determination that an Floodplain application contains the appropriate information for review does not ensure that the Floodplain permit application will be approved or conditionally approved and does not limit the ability of the Floodplain Administrator in requesting additional information during the review process.

8.2 NOTICE REQUIREMENTS FOR FLOODPLAIN PERMIT APPLICATIONS:

1. Upon receipt of a complete application for a Floodplain permit, the Floodplain Administrator shall prepare a notice containing the facts pertinent to the Floodplain permit application and shall:

   1. Publish the notice at least once in a newspaper of general circulation in the area;
2. Serve notice by first-class mail upon adjacent property owners;

3. Serve notice to the State National Flood Insurance Program Coordinator located in DNRC by the most efficient method. Notice to other permitting agencies or other impacted property owners may be provided; and

4. Prior to any alteration or relocation of a watercourse in the Regulated Flood Hazard Area, additionally provide notice to FEMA and adjacent communities.

2. The notice shall provide a reasonable period of time, not less than 15 days, for interested parties to submit comments on the proposed activity.

8.3 FLOODPLAIN PERMIT CRITERIA

1. Floodplain permit applications shall be approved or denied on the basis of whether the proposed new construction, substantial improvement, or alteration of an artificial obstruction or nonconforming use is not prohibited and meets the requirements of the minimum standards and criteria in Sections 9 and 10 and other requirements of these regulations.

2. A floodplain permit application that proposes a development that is determined to cause an increase of more than 0.00 feet to the Base Flood Elevation of the Floodway or more than 0.50 feet to the Base Flood Elevation of the Regulated Flood Hazard Area without a Floodway, may be approved only if an Alteration pursuant to Section 4.3 has been approved and the Regulated Flood Hazard Area is amended herein.

3. The Floodplain Administrator must determine that all necessary permits have been received from those governmental agencies from which approval is required by Federal or State law, including section 404 of the Federal Water Pollution Control Act Amendment of 1972, 36 U.S.C. 1334.

8.4 DECISION

1. The Floodplain Administrator shall approve, conditionally approve, or deny the proposed Floodplain application. The Floodplain Administrator shall notify the applicant of his action and the reasons thereof within 60 days of receipt of a correct and complete Floodplain application unless otherwise specified. A copy of the approved Floodplain permit must be provided to DNRC.

2. The approval of a Floodplain permit application does not affect any other type of approval required by any other statute or ordinance of the state or any political subdivision or the United States, but is an added requirement.
8.5 FLOODPLAIN PERMIT CONDITIONS AND REQUIREMENTS

1. Upon approval or conditional approval of the Floodplain permit application, the Floodplain Administrator shall provide the applicant with a Floodplain permit with applicable specific requirements and conditions including but not limited to the following:

1. The Floodplain permit will become valid when all other necessary permits are in place;

2. The Floodplain permit will be valid for to one year from the date of Floodplain permit issuance or a time limit commensurate with the project construction time line for completion of the project or development. The applicant may request an extension for up to an additional year. The request must be made at least 30 days prior to the completion deadline;

3. The applicant shall notify subsequent property owners and their agents and potential buyers of the Floodplain development permit issued on the property and that such property is located within a Regulated Flood Hazard Area;

4. The applicant shall maintain the artificial obstruction or use to comply with the conditions and specifications of the permit;

5. The applicant shall allow the Floodplain Administrator to perform on site inspections at select intervals during construction or completion;

6. The applicant shall provide periodic engineering oversight and/or interim reports during the construction period to be submitted to the Floodplain Administrator to confirm constructed elevations and other project elements;

7. The applicant shall submit a compliance report including certifications where required and applicable including flood proofing, elevation, surface drainage, proper enclosure openings and materials to the Floodplain Administrator within 30 days of completion or other time as specified;

8. The applicant shall submit an annual performance and maintenance report on bank stabilization or other projects utilizing maturing vegetative components to the Floodplain Administrator; and

9. The applicant shall submit a Letter of Map Revision to FEMA within 6 months of project completion.

10. The floodplain administrator shall be supplied a copy of the proposed Letter of Map Revision and shall review it as to form prior to the Letter of Map Revision being sent to FEMA.
SECTION 9. DEVELOPMENT REQUIREMENTS IN THE FLOODWAY

9.1 USES REQUIRING PERMITS  Uses specifically listed in Sections 9.3 to 9.15 may be allowed by permit within the Floodway, provided the General Requirements in Section 9.2 and the applicable requirements in Sections 9.3 to 9.15 are met.

9.2 GENERAL REQUIREMENTS  An application for a permit must demonstrate compliance with all of the following requirements:

1. All projects must be designed and constructed to ensure that they do not adversely affect the flood hazard on other properties and are reasonably safe from flooding; and

2. All projects must assure that the carrying capacity of the Floodway is not reduced. All projects in the Floodway must be supported by an encroachment analysis, a thorough hydrologic and hydraulic analysis prepared by an engineer to demonstrate the effect on flood flows, velocities and the Base Flood Elevation, and meet the following:

   1. No increase (0.00 feet) to the Base Flood Elevation is allowed, unless approval of an alteration of the Regulated Flood Hazard Area pursuant to Section 4.3 and an approved FEMA Conditional Letter of Map Revision occurs before permit issuance; and

   2. Although all other development standards herein apply, a minimal or qualitative encroachment analysis may be accepted when the project or development does not require a structure, alteration of the Floodway, involve fill, grading, excavation or storage of materials or equipment and also is certified by an engineer to not exceed the allowable encroachment.

3. An application for a Floodplain permit must also demonstrate the following factors are considered and incorporated into the design of the use or artificial obstruction in the Floodway:

   1. The danger to life and property due to backwater or diverted flow caused by the obstruction or use;

   2. The danger that the obstruction or use may be swept downstream to the injury of others;

   3. The availability of alternative locations;

   4. The construction or alteration of the obstruction or use in such manner as to lessen the flooding danger;
5. The permanence of the obstruction or use;

6. The anticipated development in the foreseeable future of the area which may be affected by the obstruction or use;

7. Relevant and related permits for the project have been obtained;

8. Such other factors as are in harmony with the purposes of these regulations, the Montana Floodplain and Floodway Management Act, and the accompanying Administrative Rules of Montana; and

9. The safety of access to property in times of flooding for ordinary and emergency services.

9.3 MINING OF MATERIAL REQUIRING EXCAVATION FROM PITS OR POOLS provided that:

1. A buffer strip of undisturbed land of sufficient width as determined by an engineer to prevent flood flows from channeling into the excavation is left between the edge of the channel and the edge of the excavation;

2. The excavation meets all applicable laws and regulations of other local and state agencies; and

3. Excavated material may be processed on site but is stockpiled outside the Floodway.

9.4 RAILROAD, HIGHWAY AND STREET STREAM CROSSINGS provided that:

1. Crossings are designed to offer minimal obstructions to the flood flow;

2. Where failure or interruption of public transportation facilities would result in danger to public health or safety and where practicable and in consideration of FHWA Federal-Aid Policy Guide 23CFR650A:

   1. Bridge lower chords shall have freeboard to at least two (2) feet above the Base Flood Elevation to help pass ice flows, the base flood discharge and any debris associated with the discharge; and

   2. Culverts shall be designed to pass the Base Flood discharge and maintain at least two (2) feet freeboard on the crossing surface;

3. Normal overflow channels, if possible are preserved to allow passage of sediments to prevent aggradations; and

4. Mid stream supports for bridges, if necessary, have footings buried below the maximum scour depth.
9.5 LIMITED FILLING FOR ROAD AND RAILROAD EMBANKMENTS not associated with stream crossings and bridges provided that:

1. The fill is suitable fill;

2. Reasonable alternate transportation routes outside the floodway are not available;

3. The encroachment is located as far from the stream channel as possible; and

4. The project includes mitigation of impacts to other property owners in the vicinity of the project and the natural stream function.

9.6 BURIED OR SUSPENDED UTILITY TRANSMISSION LINES provided that:

1. Suspended utility transmission lines are designed such that the lowest point of the suspended line is at least six (6) feet higher than the Base Flood Elevation;

2. Towers and other appurtenant structures are designed and placed to withstand and offer minimal obstruction to flood flows;

3. Alternatives such as alternative routes, directional drilling, and aerial crossings are considered when technically feasible; and

4. Utility transmission lines carrying toxic or flammable materials are buried to a depth of at least twice the calculated maximum scour depth determined by an engineer for the Base Flood.

9.7 STORAGE OF MATERIALS AND EQUIPMENT provided that:

1. The material or equipment is not subject to major damage by flooding and is properly anchored to prevent flotation or downstream movement; or

2. The material or equipment is readily removable within the limited time available after flood warning. Storage of flammable, toxic or explosive materials shall not be permitted.

9.8 DOMESTIC WATER SUPPLY WELLS provided that:

1. They are driven or drilled wells located on ground higher than surrounding ground to assure positive drainage from the well;

2. They require no other structures (e.g. a well house);
3. Well casings are water tight to a distance of at least twenty five (25) feet below the ground surface and the well casing height is a minimum of eighteen (18) inches above the Base Flood Elevation or capped with a watertight seal and vented eighteen (18) inches above the Base Flood Elevation;

4. Water supply lines have a watertight seal where the lines enter the casing;

5. All pumps and electrical lines and equipment are either of the submersible type or are adequately flood proofed; and

6. Check valves are installed on main water lines at wells and at all building entry locations.

**9.9 BURIED AND SEALED VAULTS FOR SEWAGE DISPOSAL IN CAMPGROUNDS AND RECREATIONAL AREAS provided they meet applicable laws and standards administered by Montana Department of Environmental Quality. Only those wastewater disposal systems that meet the requirements and separation distances under the appropriate health and sanitation regulations are allowed.**

**9.10 PUBLIC AND PRIVATE CAMPGROUNDS provided that:**

1. Access roads require only limited fill and do not obstruct or divert flood waters;

2. The project meets the accessory structures requirements in this Section;

3. No dwellings or permanent mobile homes are allowed;

4. Recreational vehicles and travel trailers are ready for highway use with wheels intact, with only quick disconnect type utilities and securing devices, and have no permanently attached additions; and

5. There is no large-scale clearing of riparian vegetation within 50 feet of the mean annual high water mark.

**9.11 STRUCTURES ACCESSORY OR APPURTEMINANT to permitted uses such as boat docks, loading and parking areas, marinas, sheds, emergency airstrips, permanent fences crossing channels, picnic shelters and tables and lavatories, that are incidental to a principal structure, provided that:**

1. The structures are not intended for human habitation or supportive of human habitation;

2. The structures will have low flood damage potential;

3. The structures will, insofar as possible, be located on ground higher than the surrounding ground and as far from the channel as possible;
4. The structures will be constructed and placed so as to offer a minimal obstruction to flood flows;

5. Only those wastewater disposal systems that meet the requirements and separation distances under health and sanitation regulations are allowed;

6. Service facilities within these structures such as electrical, heating and plumbing are flood proofed according to the requirements in Section 10;

7. The structures are firmly anchored to prevent flotation;

8. The structures do not require fill and/or substantial excavation;

9. The structures or use cannot be changed or altered without permit approval; and

10. There is no large scale clearing of riparian vegetation within 50 feet of the mean annual high water mark.

9.12 CONSTRUCTION OF OR MODIFICATIONS TO SURFACE WATER DIVERSIONS provided that the design is prepared and approved by an engineer and includes:

1. Measures to minimize potential erosion from a Base Flood; and

2. Plans that demonstrate any permanent structure crossing the stream is designed to safely withstand up to the Base Flood.

9.13 FLOOD CONTROL AND BANK PROTECTION MEASURES provided the design is reviewed and approved by an engineer and constructed to substantially resist or withstand the forces associated with hydrodynamic and hydrostatic pressures, including flood depths, velocities, impact, ice, buoyancy, and uplift forces associated with the Base Flood in addition to an encroachment analysis. The design must also show compliance with the following applicable criteria:

1. LEVEE AND FLOODWALL construction or alteration:
   1. Must be designed and constructed with suitable fill and be designed to safely convey a Base Flood;

   2. Must be constructed at least 3 feet higher than the elevation of the Base Flood unless the levee or floodwall protects agricultural land only;

   3. Must meet state and federal levee engineering and construction standards and be publically owned and maintained if it protects structures of more than one landowner; and
4. For any increase in the elevation of the Base Flood the following information must be provided:

1. The estimated cumulative effect of other reasonably anticipated future permissible uses;

2. The type and amount of existing flood prone development in the affected area; and

3. Impacts to existing or foreseeable development.

2. BANK STABILIZATION, PIER AND ABUTMENT PROTECTION projects:

   1. Must be designed and constructed using methods and materials that are the least environmentally damaging yet practicable, and should be designed to withstand a Base Flood once the project’s vegetative components are mature within a period of up to 5 years or other time as required by the Floodplain Administrator. Once vegetation is mature and established it should not require substantial yearly maintenance after the initial period;

   2. Materials for the project may be designed to erode over time but not fail catastrophically and impact others. Erosion, sedimentation, and transport of the materials may be designed to be at least similar in amount and rate of existing stable natural stream banks during the Base Flood;

   3. Must not increase erosion upstream, downstream, across from or adjacent to the site in excess of the existing stable natural stream bank during the Base Flood;

   4. Materials for the project may include but are not limited to riprap, root wads, brush mattresses, willow wattles, natural woody debris or combinations of analogous materials;

3. CHANNELIZATION PROJECTS where the excavation and/or construction of an channel is for the purpose of diverting the entire or a portion of the flow of a stream from its established course, the project must:

   1. Not increase the magnitude, velocity, or elevation of the Base Flood; and

   2. Meet the requirements of Section 9.13.2.

4. DAMS:

   1. The design and construction shall be in accordance with the Montana Dam Safety Act and applicable safety standards;
2. The project shall not increase flood hazards downstream either through operational procedures or improper hydrologic/hydraulic design; and

9.14 STREAM AND BANK RESTORATION projects intended to reestablish the terrestrial and aquatic attributes of a natural stream and not for protection of a structure or development provided that:

1. The project will not increase velocity or erosion upstream, downstream, across from or adjacent to the site;

2. Materials may include but are not limited to boulders, rock cobble, gravel, native stream bed materials, root wads, brush mattresses, willow wattles, natural woody debris or combinations of analogous materials;

3. Erosion, sedimentation, and transport of the materials are not more than the amount and rate of existing natural stream banks during the Base Flood;

4. The project may be designed to allow vegetative materials to mature within a period up to 5 years or other time as required by the Floodplain Administrator. Once vegetation is mature and established it should not require substantial yearly maintenance after the initial period; and

9.15 ALTERATIONS TO EXISTING RESIDENTIAL AND NON-RESIDENTIAL BUILDINGS IN THE FLOODWAY where any change or addition to an existing building either increases the external dimensions or increases the potential flood hazard, provided the General Requirements of Section 9.2 and the applicable requirements for residential and non-residential buildings in Section 10 are met.
SECTION 10. DEVELOPMENT REQUIREMENTS IN THE FLOOD FRINGE OR REGULATED FLOOD HAZARD AREA WITH NO FLOODWAY

10.1 USES REQUIRING PERMITS – All uses allowed by permit in the Floodway shall also be allowed by permit within the Flood Fringe or Regulated Flood Hazard Area with no Floodway. Such uses are subject to the requirements in Section 9, with the exception of the encroachment limit of Section 9.2.2. Instead, such uses are subject to the encroachment limits of this Section.

Except for prohibited artificial obstructions in Section 6.2, all other artificial obstructions including new construction, substantial improvements, alterations to residential, and nonresidential structures including manufactured homes, and related suitable fill or excavation shall be allowed by permit and are subject to the requirements in this Section and General Requirements of Section 9.2, with the exception of the encroachment limit of Section 9.2.2.

10.2 GENERAL REQUIREMENTS An application for a Floodplain permit must demonstrate or meet the following applicable requirements:

1. Base Flood Elevation Base Flood Elevation(s) must be determined by an engineer and utilized in the design and layout of the project demonstrating the design and construction criteria herein are met. For Regulated Flood Hazard Areas that do not have computed and published Base Flood Elevations in the adopted flood hazard study referenced in Section 4, a Base Flood Elevation must be determined or obtained from a reliable source, utilizing appropriate engineering methods and analyses;

2. Flood Damage Structures must be constructed by methods and practices that minimize flood damage and structures must be reasonably safe from flooding;

3. Surface Drainage Adequate surface drainage must be provided around structures;

4. Materials Structures must be constructed with materials resistant to flood damage;

5. Artificial Obstructions Structures, excavation or fill must not be prohibited by any other statute, regulation, ordinance, or resolution; and must be compatible with subdivision, zoning and any other land use regulations, if any;

6. Anchoring All construction and substantial improvements must be designed and adequately anchored to prevent flotation, collapse, or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy;
7. **Certification**  Certification by an engineer, architect, land surveyor, or other licensed professional whose area of expertise is germane to these regulations must accompany the application where required including for an encroachment analysis, adequacy of structural elevations, Base Flood Elevation determinations, flood-proofing, enclosure flood openings and design and construction to withstand the hydrodynamic forces and hydrostatic pressures of flood depths, velocities, impact, buoyancy, uplift forces associated with the Base Flood and surface drainage. A certification is not intended to constitute a warranty or guarantee of performance, expressed or implied;

8. **Access**  Structures must have safe access during times of flooding up to the Base Flood for ordinary and emergency services provided there are no reasonable alternate locations for structures;

9. **Encroachment Analysis**

   1. All applications in the Regulated Flood Hazard Area without a Floodway must be supported by an encroachment analysis of the proposed use, a thorough hydrologic and hydraulic analysis except as provided in following paragraph 4, Section 10.2.9.4, prepared by an engineer to demonstrate the effect of the structure on flood flows, velocities and the Base Flood Elevation;

   2. The maximum allowable encroachment is certified to be at or less than 0.5 feet increase to the Base Flood Elevation unless approval of an alteration of the Regulated Flood Hazard Area pursuant to Section 4 and an approved FEMA Conditional Letter of Map Revision occurs before permit issuance;

   3. An encroachment analysis is not required for any development in the Flood Fringe where an accompanying Floodway has been designated within the Regulated Flood Hazard Area; and

   4. Although all other development standards herein apply, a minimal or qualitative encroachment analysis may be accepted when the project or development does not require a structure, alteration of the Floodplain, involve fill, grading, excavation or storage of materials or equipment and also is certified by an engineer to not exceed the allowable encroachment.

10. **Electrical Systems Flood Proofing**  All electrical service materials, equipment and installation for uses in a Regulated Flood Hazard Area must be certified to meet the following requirements:

    1. All incoming power service equipment including all metering equipment, control centers, transformers, distribution and lighting panels and all other stationary equipment must be located at least two feet above the Base Flood Elevation;
2. Portable and movable electrical equipment may be placed below the Base Flood Elevation, provided that the equipment can be disconnected by a single plug and socket assembly of the submersible type;

3. The main power service lines must have automatically operated electrical disconnect equipment or manually operated electrical disconnect equipment located at an accessible remote location outside the Regulated Flood Hazard Area or two feet above the Base Flood Elevation; and

4. All electrical wiring systems installed below the Base Flood Elevation must be suitable for continuous submergence and may not contain fibrous components.

11. **Heating and Cooling Systems Flood Proofing** Heating and cooling systems for uses in a Regulated Flood Hazard Area must be certified to meet the following requirements:

   1. Float operated automatic control valves must be installed so that fuel supply is automatically shut off when flood waters reach the floor level where the heating and cooling systems are located;

   2. Manually operated gate valves must be installed in gas supply lines. The gate valves must be operable from a location above the Base Flood Elevation;

   3. Electrical Systems flood proofing must be met; and

   4. Furnaces and cooling units and ductwork must be installed at least two (2) feet above the Base Flood Elevation.

12. **Plumbing Systems Flood Proofing** Plumbing systems for uses in the Regulated Flood Hazard Area must be certified to meet the following requirements:

   1. Sewer lines, except those to a buried and sealed vault, must have check valves installed to prevent sewage backup into permitted structures; and

   2. All toilets, stools, sinks, urinals, vaults, and drains must be located so the lowest point of possible flood water entry is at least two (2) feet above the Base Flood Elevation.

13. **Structural Fill Flood Proofing** Fill used to elevate structures, including but not limited to residential, commercial, and industrial buildings meet and be certified to the following requirements:

   1. The filled area must be at or above the Base Flood Elevation and extend at least fifteen (15) feet beyond the structure in all directions;
2. Fill material must be suitable fill, that is stable, compacted, well graded, and pervious, not adversely affected by water and frost, devoid of trash or similar foreign matter, tree stumps or other organic material; and is fitting for the purpose of supporting the intended use and/or permanent structure.

3. The fill must be compacted to minimize settlement and compacted to 95 percent of the maximum density. Compaction of earthen fill must be certified by an engineer;

4. No portion of the fill is allowed within the floodway;

5. The fill slope must not be steeper than 1 ½ horizontal to 1 vertical unless substantiating data justifying a steeper slope is provided and adequate erosion protection is provided for fill slopes exposed to floodwaters; and

14. Wet Flood Proofing  Building designs with an enclosure below the lowest floor must be certified to meet the following:

   1. The use of the enclosure is limited to parking, loading areas, building access, and storage of equipment or materials not appreciably affected by floodwaters;

   2. Materials used for walls and floors are resistant to flooding to an elevation two (2) feet or more above the Base Flood Elevation;

   3. The enclosure must be designed to equalize hydrostatic forces on walls by allowing for entry and exit of floodwaters. Opening designs must either be certified by an engineer or architect or meet or exceed the following:

      1. Automatically allow entry and exit of floodwaters through screens, louvers, valves, and other coverings or devices;

      2. Have two (2) or more openings with a total net area of not less than one (1) square inch for every one (1) square foot of enclosed area below the Lowest Floor, except if the enclosure is partially subgrade, a minimum of 2 openings may be provided on a single wall; and

      3. Have the bottom of all openings no higher than one (1) foot above higher grade.

15. Dry Flood Proofing  Building designs that do not allow internal flooding must be certified to meet the following:

   1. Be for non-residential use only;
2. Be Flood Proofed to an elevation no lower than two (2) feet above the Base Flood Elevation;

3. Be constructed of impermeable membranes or materials for floors and walls and have water tight enclosures for all windows, doors and other openings; and

4. Be designed to withstand the hydrostatic pressures and hydrodynamic forces resulting from the Base Flood and the effects of buoyancy.

16. **Elevation** The lowest floor elevation (including basement) must be two (2) feet above the Base Flood Elevation. A determination of the Base Flood Elevation is certified by an engineer. Elevating may be by either suitable fill, stem walls, pilings or other acceptable means;

17. **Enclosure** Any enclosure below the lowest elevated floor must be designed to meet the wet flood proofing requirements and the enclosure floor must be at or above the Base Flood Elevation.

18. **Basement** Basements are not allowed in the floodplain except where the basement floor is two (2) feet or more above the Base Flood Elevation;

19. **Crawl Spaces** Crawl space foundation enclosures including sub grade crawlspace enclosures below the lowest floor must meet the wet flood proofing requirements and be designed so that the crawl space floor is at or above the Base Flood Elevation. Crawl space foundations must have an inside dimension of not more than five (5) feet from the ground to the top of the living floor level and a sub grade crawlspace must also have the interior ground surface no more than two (2) feet below the exterior lowest adjacent ground surface on all sides. A sub grade foundation exceeding either dimension is a basement;

20. **Variance** Where strict compliance with flood proofing provisions is impossible because of existing streets, utilities, lot dimensions, or additions onto existing structures, alternative fill or flood proofing measures may be permitted only by variance approval;

21. **Manufactured Home Anchors** For new placement, substantial improvement or replacement of manufactured homes for residential or nonresidential use including additions, the chassis must be secure and must resist flotation, collapse or lateral movement by anchoring with anchoring components capable of carrying a force of 4,800 pounds and as follows:

1. For manufactured homes less than fifty (50) feet long, over-the-top ties to ground anchors are required at each of the four (4) corners of the home, with two additional ties per side at intermediate locations; or
2. For manufactured homes more than fifty (50) feet long, frame ties to ground anchors are required at each corner of the home with five (5) additional ties per side at intermediate points; and

22. **Access** Access for emergency vehicles is provided. For manufactured homes, access for a manufactured home hauler is also provided.

**10.3 RESIDENTIAL BUILDING, EXCEPTIONS OR ADDITIONAL REQUIREMENTS**

New construction, alterations, and substantial improvements of residential dwellings, manufactured homes, including replacement of manufactured homes, must be constructed such that:

1. **Flood Proofing** The Lowest Floor must be 2 (two) feet or more above the Base Flood Elevation and cannot be wet or dry flood proofed;

2. **Enclosure** Use for a crawlspace enclosure is limited to facilitating building component access. The enclosure cannot be dry flood proofed. An attached garage must meet the wet flood proofing requirements except for both the required flood openings and limits on use but the attached garage floor must be two (2) or more feet above the Base Flood Elevation; and

3. **Recreation Vehicles** Recreational vehicles on site for more than 180 days or not ready for highway use must meet the requirements for manufactured homes for residential use.

**10.4 NON-RESIDENTIAL BUILDING, EXCEPTIONS OR ADDITIONAL REQUIREMENTS**

New construction, alterations, and substantial improvements of non-residential including agricultural, commercial and industrial buildings must be constructed such that:

1. **Flood Proofing** The Lowest Floor of the building must be elevated two (2) feet above the Base Flood Elevation or adequately dry flood proofed according to this Section;

2. **Enclosure** Enclosures below the Lowest Floor on elevated buildings must be wet flood proofed and the use must be limited to parking, access or storage or dry flood proofed;

3. **Manufactured homes** Manufactured homes proposed for use as commercial or industrial buildings cannot be dry flood proofed; and

4. **Agricultural structures** Agricultural structures not intended to be insurable, used solely for agricultural purposes, having low flood damage potential, used exclusively in connection with the production, harvesting, storage, drying, or raising of agricultural commodities including raising of livestock, and not intended for human habitation are exempt from the elevation requirement, dry or wet flood proofing, but shall:
1. Be located on higher ground and as far from the channel as possible;

2. Offer minimal obstruction to flood flows;

3. Be adequately anchored to prevent flotation or collapse;

4. Where electrical, heating and plumbing systems are installed, meet the flood proofing requirements in this Section; and

5. Meet the elevation or dry flood proofing requirements if the structure is an animal confinement facility.
SECTION 11. EMERGENCIES

11.1 General

1. Emergency repair and replacement of severely damaged artificial obstructions and development in the Regulated Flood Hazard Area, including public transportation facilities, public water and sewer facilities, flood control works, and private projects are subject to the permitting requirements of these regulations.

2. The provisions of these regulations are not intended to affect other actions that are necessary to safeguard life or structures during periods of emergency.

11.2 Emergency Notification and Application Requirements

1. The property owner and or the person responsible for taking emergency action must notify the Floodplain Administrator prior to initiating any emergency action in a Regulated Flood Hazard Area normally requiring a Floodplain permit. An Emergency Notification Form must be submitted to the Floodplain Administrator within five (5) days of the action taken as a result of an emergency.

2. Unless otherwise specified by the Floodplain Administrator, within 30 days of initiating the emergency action, a person who has undertaken an emergency action must submit a Floodplain Permit Application that describes what action has taken place during the emergency and describe any additional work that may be required to bring the project in compliance with these regulations.

3. A person who has undertaken an emergency action may be required to modify or remove the project in order to meet the permit requirements.
SECTION 12.  VARIANCES

12.1 GENERAL - A variance from the minimum development standards of these regulations may be allowed. An approved variance would permit construction in a manner otherwise as required or prohibited by these regulations.

12.2 VARIANCE APPLICATION REQUIREMENTS:

1. Prior to any consideration of a variance from any development standard in these regulations, a completed Floodplain Permit application and required supporting material must be submitted.

2. Additionally, a completed Variance application specific to the variance request including facts and information addressing the criteria in this section must be submitted.

3. If the Floodplain permit application and Variance application is deemed not correct and complete, the Floodplain Administrator shall notify the applicant of deficiencies within a reasonable time not to exceed 30 days. Under no circumstances should it be assumed that the variance is automatically granted.

12.3 NOTICE REQUIREMENTS FOR FLOODPLAIN VARIANCE APPLICATION
Public Notice of the Floodplain permit application and Variance application shall be given pursuant to Section 8.2.

12.4 EVALUATION OF VARIANCE APPLICATION

1. A Floodplain permit and Variance shall only be issued upon a determination that the variance is the minimum allowance necessary, considering the flood hazard, to afford relief from these regulations and provided all of the following criteria are met:

   1. There is a good and sufficient cause. Financial hardship is not a good and sufficient cause;

   2. Failure to grant the variance would result in exceptional hardship to the applicant;

   3. Residential dwellings including basements and attached garages do not have the lowest floor elevation below the Base Flood Elevation;

   4. Any enclosure including a crawl space must meet the requirements of Section 10.2.14, Wet Flood Proofing if the enclosure interior grade is at or below the Base Flood Elevation;
5. Granting of a variance will not result in increased flood heights to existing buildings, additional threats to public safety, extraordinary public expense, create nuisances, cause fraud on or victimization of the public, or conflict with other existing local laws or ordinances;

6. The proposed use is adequately flood proofed;

7. The variance is the minimum necessary, considering the flood hazard, to afford relief;

8. Reasonable alternative locations are not available;

9. An encroachment that causes an increase to the Base Flood Elevation that is beyond that allowed in these regulations cannot be permitted by a variance but may only be allowed if an Alteration is approved pursuant to Section 4; and

10. All other criteria for a Floodplain permit besides the specific development standard requested by variance are met.

2. An exception to the variance criteria may be allowed as follows:

1. If the variance is for new construction or substantial improvements on a lot of one-half acres or less that is contiguous to and surrounded by lots with existing structures constructed below the Base Flood Elevation, a variance may be approved; and

2. Historic Structures – variances may be issued for the repair or rehabilitation of historic structures upon a determination that the proposed repair or rehabilitation will not preclude the structure’s continued designation as a historic structure and the variance is the minimum relief necessary to preserve the historic character and design of the structure. The historic nature of the building must be designated as a preliminary or historic structure by U.S. Secretary of Interior or an approved state or local government historic preservation program.

12.5 DECISION

1. The Board of County Commissioners shall:

   1. Evaluate the Floodplain permit application and Variance application using the criteria in this section, and the application requirements and minimum development standards in Section 9 and 10;

   2. Make findings, and approve, conditionally approve or deny a Floodplain
permit and variance within 60 days of a complete application.

3. If approved, attach conditions to the approval of Floodplain permit and Variance including a project completion date and inspections during and after construction.

4. Notify the applicant that the issuance of a Floodplain permit and Variance to construct a structure below the Base Flood Elevation may result in increased premium rates for flood insurance and that flood insurance premiums are determined by actuarial risk and will not be modified by the granting of a variance.

5. Submit to the Floodplain Administrator a record of all actions involving a Floodplain permit and variance, including the findings and decision and send a copy of each variance granted to DNRC.

12.6 JUDICIAL REVIEW
Any person or persons aggrieved by the Floodplain permit and variance decision may appeal such decision in a court of competent jurisdiction.
SECTION 13. ADMINISTRATIVE APPEALS

13.1 GENERAL An administrative appeal may be brought before the Board of County Commissioners for review of the Floodplain Administrator’s order, decision to grant, condition or deny a floodplain permit or interpretation of the Regulated Flood Hazard Area boundary.

13.2 APPEALS REQUIREMENTS The following provisions apply to administrative appeals:

1. An appeal shall include the basis of the appeal and supporting information including specific findings and conclusions of the Floodplain Administrator’s decision being appealed;

2. An appeal must be submitted by an applicant and/or anyone who may be aggrieved by the Floodplain Administrator’s decision or order;

3. Appeals must be received within 30 days of the date of the decision or order of the Floodplain Administrator; and

4. Additional information specific to the appeal request may be requested.

13.3 NOTICE AND HEARING

1. Notice of the pending appeal and public hearing shall be provided pursuant to Section 8.2. The Floodplain Administrator may notify DNRC and FEMA of pending appeals.

2. A public hearing on the appeal must be held within 30 days of the Notice unless set otherwise.

13.4 DECISION
A judgment on an appeal shall be made within 30 days of the hearing unless set otherwise. The decision may grant the permit, modify or deny the permit or remand the application to the Floodplain Administrator with instructions or directions. A decision on an appeal of a permit cannot grant or issue a variance. A decision may support, reverse or remand an order or determination of a boundary of the Regulated Flood Hazard Area by the Floodplain Administrator.

13.5 JUDICIAL REVIEW
Any person or persons aggrieved by the decision on an administrative appeal may appeal such decision in a court of competent jurisdiction.
SECTION 14.   ENFORCEMENT

14.1 INVESTIGATION REQUEST  An investigation to determine compliance with these regulations for an artificial obstruction or nonconforming use within the Regulated Flood Hazard Area may be made either on the initiative of the Floodplain Administrator or on the written request of three titleholders of land which may be affected by the activity. The names and addresses of the persons requesting the investigation shall be released if requested.

14.2 NOTICE TO ENTER AND INVESTIGATE LANDS OR WATERS  The Floodplain Administrator may make reasonable entry upon any lands and waters for the purpose of making an investigation, inspection or survey to verify compliance with these regulations.

1. The Floodplain Administrator shall provide notice of entry by mail, electronic mail, phone call, or personal delivery to the owner, owner’s agent, lessee, or lessee’s agent whose lands will be entered.

2. If none of these persons can be found, the Floodplain Administrator shall affix a copy of the notice to one or more conspicuous places on the property.

3. If the owners do not respond, cannot be located or refuse entry to the Floodplain Administrator, the Floodplain Administrator may only enter the property through a Search Warrant.

4. A search warrant is not necessary if consent to enter the property is given by the property owner.

14.3 NOTICE TO RESPOND AND ORDER TO TAKE CORRECTIVE ACTION  When the Floodplain Administrator determines that a violation may have occurred, the Floodplain Administrator may issue written notice to the owner or an agent of the owner, either personally or by certified mail. Such notice shall cite the regulatory offense and include an order to take corrective action within a reasonable time or to respond by requesting an administrative review by the Floodplain Administrator.

14.4 ADMINISTRATIVE REVIEW  The order to take corrective action is final, unless within five (5) working days or any granted extension, after the order is received, the owner submits a written request for an administrative review by the Floodplain Administrator. A request for an administrative review does not stay the order.

14.5 APPEAL OF ADMINISTRATIVE DECISION  Within ten (10) working days or any granted extension of receipt of the Floodplain Administrator’s decision concluding the administrative review, the property owner or owner’s agent may appeal the decision pursuant to Section 13.
14.6 FAILURE TO COMPLY WITH ORDER TO TAKE CORRECTIVE ACTION If the owner fails to comply with the order for corrective action, remedies may include administrative or legal actions, or penalties through court.

14.7 OTHER REMEDIES This section does not prevent efforts to obtain voluntary compliance through warning, conference, or any other appropriate means. Action under this part shall not bar enforcement of these regulations by injunction or other appropriate remedy.
SECTION 15. PENALTIES

15.1 MISDEMEANOR  Violation of the provisions of these regulations or failure to comply with any of the requirements, including failure to obtain permit approval prior to development in the Regulated Flood Hazard Area except for an emergency, shall constitute a misdemeanor and may be treated as a public nuisance.

Any person who violates these regulations or fails to comply with any of its requirements shall, upon conviction thereof, be fined not more than $100 or imprisoned for not more than 10 days or both. Each day’s continuance of a violation shall be deemed a separate and distinct offense.

15.2 DECLARATION TO THE FEDERAL FLOOD INSURANCE ADMINISTRATOR
Upon finding of a violation and failure of the owner to take corrective action as ordered, the Floodplain Administrator may submit notice and request a 1316 Violation Declaration to the Federal Insurance Administrator. The Federal Insurance Administrator has the authority to deny new and renewal flood insurance for a structure upon finding a valid violation declaration.

The Floodplain Administrator shall provide the Federal Insurance Administrator the following:

1. The name(s) of the property owner(s) and address or legal description of the property sufficient to confirm its identity and location;

2. A clear and unequivocal declaration that the property is in violation of a cited State or local law, regulation or ordinance;

3. A clear statement that the public body making the declaration has authority to do so and a citation to that authority;

4. Evidence that the property owner has been provided notice of the violation and the prospective denial of insurance; and

5. A clear statement that the declaration is being submitted pursuant to section 1316 of the National Flood Insurance Act of 1968, as amended.
